Ali Rayyan

SOC Analyst | Blue Team | Threat Detection and Incident Response

Pakistan | +92 3147862856 | alirayyancyber@gmail.com

linkedin.com/in/ali-rayyan-cybersecurity | github.com/aliray-yan | Evidence Portfolio: github.com/aliray-yan/Evidence-Portfolio | Portfolio: aliray-yan.github.io/Portfolio

Technical Skills

SIEM and Detection: Wazuh, Microsoft Sentinel, Elastic SIEM, Sumo Logic, Suricata IDS, KQL, detection rules, log correlation, alert triage, honeypots

Incident Response and Forensics: NIST SP 800-61, MITRE ATT&CK, Autopsy, FTK Imager, Volatility 3, Wireshark, PCAP analysis, malware analysis, IOC extraction

Network, Cloud and Automation: FortiGate, Active Directory, AWS CloudTrail and GuardDuty, Nmap, Nessus, CVSS, Python, n8n, Tines, Sublime Security, Git

Professional Experience

SOC Analyst Intern, Blue Team | Cyberster | Remote | Mar 2026 - May 2026

- Centralized FortiGate logs in Wazuh by routing inter-VM traffic through a perimeter firewall and resolving a UDP 514 port conflict to enable unified monitoring.
- Analyzed njRAT and Win32.Infostealer.Dexter statically and dynamically; extracted 14 IOCs and wrote 4 Suricata signatures and 4 Wazuh host rules.
- Reconstructed an 11-event timeline for the M57.biz case with Autopsy, FTK Imager, EvtxECmd and Volatility 3, proving social engineering rather than an insider threat.

Cybersecurity Threat Research Intern | Tech Hierarchy | Remote | Mar 2026 - Apr 2026

- Researched the FBR tax fraud breach, TPS ransomware attack and MOVEit zero-day (CVE-2023-34362); mapped TTPs to MITRE ATT&CK and recommended mitigations.

Cybersecurity Analyst | Talosec | Remote | Dec 2025 - Feb 2026

- Built an enterprise SOC lab in VMware integrating FortiGate, Windows Server Active Directory and Wazuh, with multi-zone segmentation and syslog forwarding.
- Deployed Wazuh with custom brute-force and reconnaissance rules and active response across 4 endpoints, detecting 100% of simulated authentication attacks.

SOC Analyst Apprentice | Empirical Training | Greater London, UK | Jun 2025 - Aug 2025

- Investigated alerts and queried logs with KQL in Microsoft Sentinel and Sumo Logic labs; ran Nessus and Nmap scans and prioritized remediation by CVSS score.
- Built an Elastic SIEM detection rule linked to automated Tines response workflows, and a Sublime Security phishing triage workflow that cut manual triage time by 50%.
- Deployed Suricata IDS, honeypots and Canary Tokens; logged 100+ simulated attacks.
- Built an n8n pipeline that summarizes CISA and NVD CVE feeds with GPT-4, cutting manual vulnerability monitoring time by 70%.

Projects

SecureOps - SOC Analyst Workbench | Evidence-Portfolio/secureops-main

- Built an alert triage, case management and playbook platform (FastAPI, React) with JWT RBAC, live WebSocket alerts and seven threat-intelligence integrations.

IHADRS Windows EDR | Evidence-Portfolio/EDR-Ihadrs-master

- Built an endpoint detection tool with 30 MITRE ATT&CK-mapped rules, behavioral and correlation engines and 394 tests; companion Android app: IHADRS Mobile.

Cloud SIEM Investigation: Phishing to AWS Credential Exfiltration

- Correlated Proofpoint, proxy, AWS CloudTrail and GuardDuty logs in Sumo Logic Cloud SIEM into one attack narrative mapped to MITRE ATT&CK.

Education and Certifications

BS Software Engineering | Government College University Faisalabad | 2023 - 2027

Certifications: IBM Cybersecurity Analyst Professional Certificate (Coursera, 2025); Fortinet FCF Getting Started in Cybersecurity 3.0 and Threat Landscape (2025); StationX Complete Cyber Security Course Vol. 1 (2025)

Forage Job Simulations (virtual): PwC Cyber Security Consulting (risk assessment, controls testing); Deloitte Australia Cyber (web log analysis); Telstra; Mastercard; AIG Shields Up; ANZ; Datacom; Tata

Activities: US Cyber Games Season V participant; CyberHub SOC+ contributor (2025)
